

ADIMATES “SOLAR POWERA” SCRIPT

Got one of these?

Well there's sure a lot that goes into owning one.

Like I'm guessing you have one of these...

And one of these... A couple of these... Probably a few of these... Maybe one of these...

And, well, you get the picture...

So what do these all have in common?

They need power. And combined, they can eat up a *ton* of electricity...

Which costs you a lot of these!

Don't despair, we can help!

We're solar experts and we can install an economical, highly efficient, solar system in your home that'll save you hundreds, even thousands of dollars on your electric costs. Here's how:

Currently (pun intended) your house draws it's power straight from the power company day...

...and night.

Which continuously keeps your meter running up, up, up...along with your bills.

And, again, this goes on day...

...and night.

But we can fix that by installing solar panels that capture the clean, unlimited power of the sun...

Then convert it into AC current to power all the appliances in your home (your entire home!)

So when the sun's out, your electric utility usage goes way down...

Then at night it goes back to normal.

And get this! That excess solar power you don't use is bought back by your local electric company and becomes a credit on your next bill!

So, are you ready to start putting money back into *your* home through the savings you can get from going solar? Then what are you waiting for? Give us a call or visit our website and let us show *you* how solar energy is the most cost effective way to save money under the sun!
